

Module Code & Module Title
CC4057NP Introduction to Information Systems

Assessment weightage & Type
60% Group Coursework - 1

Year and Semester
2022-23 Autumn

Student name: Prabal Gurung,
Prabin Thapa, Rahul G.C. and
Aman Gurung.

Group: C3

London met ID: 22069041,
22069043, 22069057 and
22068950

Assignment due date: February 3, 2023

Assignment submission date: February 3,
2023

Declaration

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline for my assignment to be accepted and marked. I am fully aware that late submission will be treated as non-submission and a mark of zero will be awarded.

1. Introduction

This project was given to us by our module leader Mr. Dipendra Thapa. We were required to design and develop an e-commerce website for a store that sells various bonsai plants. We were required to make a website consisting of at least 5 webpages i.e. homepage which consists of a brief description of the contents present in the other webpages, blog page that gave an explanation of the drastic effect of technology in daily life and business, shop page which consisted of various items to be sold, research page that displayed the references taken for the development of the website and about us section which consists of the portfolio of the group members.

The major goal of this coursework is to make the students competent in the development and designing of website with the help of the appropriate tools and technologies. Similarly, it provides us with a basic understanding of what we need to do in our final year project (FYP). We learn to apply scripting language to our web pages through this coursework and learn about client-side validation using JavaScript. This project also trains us to work in a group and develops various skills such as leadership skill, communication etc.

The technologies that we used in the development of this website were HTML5, CSS3 and JavaScript. HTML5 was used to make a basic structure of the webpages whereas CSS3 was used to design the webpages giving it an attractive look. Similarly, JavaScript was used in order to make the website interactive.

1.1 Verdict for HTML:

HTML stands for Hyper Text Markup Language. It is the standard markup language for creating Web pages. HTML describes the structure of a Web page. It consists of a series of elements. HTML elements tell the browser how to display the content. HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc. Some of the important elements of HTML are as follows:

- The <!DOCTYPE html> declaration defines that this document is an HTML5 document.
- The <html> element is the root element of an HTML page.
- The <head> element contains meta information about the HTML page.
- The <title> element specifies a title for the HTML page (which is shown in the browser's title bar or in the page's tab).
- The <body> element defines the document's body, and is a container for all the visible contents, such as headings, paragraphs, images, hyperlinks, tables, lists, etc. (w3schools, n.d.)

Table tag:

The table tag in html is used to define or describe a table. It consists of elements like `<tr>`, `<td>` and `<th>`. An example of table tag in our project is given below:

```
<table border="0" width="100%">
<tr>
    <th>Name:</th>
    <td>Prabal Gurung</td>
</tr>
<tr>
    <th>Age:</th>
    <td>19 yrs old</td>
</tr>
<tr>
    <th>Email :</th>
    <td>abcde@gmail.com</td>
</tr>
<tr>
    <th>Education level :</th>
    <td>Currently studying at ICP </td>
</tr>
<tr>
    <th>Skills :</th>
    <td>Leadership, Verbal and written communication and programming ability in java and javascript.</td>
</tr>
</table>
```

Figure 1 : Table tag

Div tag:

The div tag is used to define a section or division in HTML. An example of div tag in our project is as follows:

```
<div class="navbar">
  <div class="box1">
    
    <input type="text" name="" placeholder="Search">
    <button>Search</button>
    <div class="icon">
      
      
    </div>
  </div>
  <div class="box2">
    <ul>
      <li><a href="../home.html" class="active">Home</a></li>
      <li><a href="Shop2.html">Shop</a></li>
      <li><a href="Aboutus.html">About us</a></li>
      <li><a href="Blog.html">Blog</a></li>
      <li><a href="reference.html">Research</a></li>
    </ul>
  </div>
</div>
```

Figure 2 : Div tag

Meta tag:

The meta tag in html is defines about the metadata of the document. An example of meta tag in our project is given below:

```
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Shop</title>
  <link rel="stylesheet" href="/css/header.css">
  <link rel="stylesheet" href="/css/shop.css">
  <link rel="stylesheet" href="/css/footer.css">
</head>
```

Figure 3 : Meta tag

Form tag:

The form tag in html is used to create a form for the purpose of user input. An example of form tag in our project is given below:

```
<form id="myform" onsubmit="return validate();">
  <div class="input_field">
    <input type="text" placeholder="Name" id="name">
  </div>
  <div class="input_field">
    <input type="text" placeholder="Phone" id="phone">
  </div>
  <div class="input_field">
    <input type="text" placeholder="Email" id="email">
  </div>
  <div class="input_field">
    <textarea placeholder="Leave us with your feedback." id="message" rows="13"></textarea>
  </div>
  <div class="button">
    <input type="submit" value="Submit">
  </div>
</form>
```

Figure 4 : Form tag

Image tag:

The img tag in html is used to embed an image in an HTML document. An example of image tag in our project is given below:

```
<div class="box1">
  
  <input type="text" name="" placeholder="Search">
```

Figure 5 : Img tag

1.2 Verdict for CSS:

Cascading Style Sheets (CSS) is a language that is used to illustrate the look, style, and format of a document written in any markup language. In simple words, it is used to style and organize the layout of Web pages. CSS3 is the latest version of an earlier CSS version, CSS2. A significant change in CSS3 in comparison to CSS2 is the introduction of modules. The benefit of this functionality is that it allows the specification to be finalized and accepted faster, as segments are finalized and accepted in portions. Also, this allows the browser to support segments of the specification. (Pedamkar, n.d.)

There are three types of CSS. They are:

- **Inline CSS:** An inline CSS is used to apply unique style to a single element in an HTML document. An example of inline css in our project is given below:

```
<div class="icon">
    
    
</div>
```

Figure 6 : Inline css

- **Internal CSS:** An internal css is used to style a single sheet of HTML page. An example of internal css in our project is given below:

```
<style>
    .img1{
        background: url("tree.jpg") no-repeat center;
        background-size: cover;
        background-attachment: fixed;
        height: 300px;
        position: relative;
    }
</style>
```

Figure 7 : Internal css

- **External CSS:** An external css is used to style an entire website or webpage with a single external style sheet. An example of link to external css in our project is given below:

```
<head>
    <meta charset="UTF-8">
    <meta http-equiv="X-UA-Compatible" content="IE=edge">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Shop</title>
    <link rel="stylesheet" href="/css/header.css">
    <link rel="stylesheet" href="/css/shop.css">
    <link rel="stylesheet" href="/css/footer.css">
</head>
```

Figure 8 : External css

1.3 Verdict for JavaScript:

JavaScript (or "JS") is a programming language used most often for dynamic client-side scripts on webpages, but it is also often used on the server-side, using a runtime such as Node.js. JavaScript is primarily used in the browser, enabling developers to manipulate webpage content, manipulate data, draw graphics with canvas, interact with the device running the browser through various APIs, and more. (Docs, n.d.)

There are two types of JavaScript. They are:

- Internal JavaScript: It is the JavaScript which is incorporated within the HTML file.

```
<script>
    function myFunction(){
        alert("Thank you for buying :)");
    }
</script>
```

Figure 9: Internal JavaScript

- External JavaScript: It is the JavaScript which is placed by giving the link to it using `<script>` tag.

```
<!-- link to javascript -->
<script src="/js/aboutus.js"></script>
</body>
```

Figure 10 : External JavaScript

All in all, this project is very beneficial to us as it makes us aware of various considerations needed to develop a website and is a useful reference for any future activities related to website development.

2. Discussion and analysis

In order to create all these webpages, HTML5, CSS3 and JavaScript were used. HTML5 was used to develop the proper semantic layout of the website, CSS3 was used to create a better appearance of the website and JavaScript was used to make dynamic changes in the website and to make it interactive.

2.1 Visual Studio Code:

All the coding part of HTML5, CSS3 and JavaScript was done in visual studio code. Visual Studio Code is a code editor redefined and optimized for building and debugging modern web and cloud applications. It is a lightweight but powerful source code editor which runs on your desktop and is available for Windows, macOS and Linux. It comes with built-in support for JavaScript, TypeScript and Node.js and has a rich ecosystem of extensions for other languages and runtimes (such as C++, C#, Java, Python, PHP, Go, .NET). (Code, n.d.)

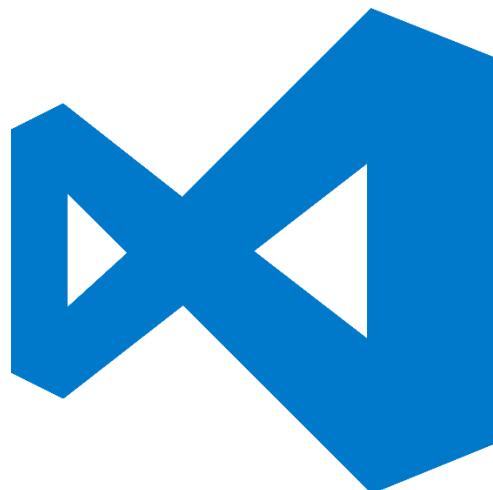

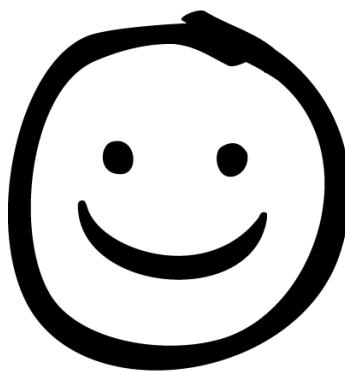

Figure 11 : Logo of visual studio code

2.2 Balsamiq wireframe:

In this project we were asked to create the wireframe of each pages of our website. To create the wireframe, we used an application called Balsamiq wireframe. Balsamiq Wireframes is a rapid low-fidelity UI wireframing tool that reproduces the experience of sketching on a notepad or whiteboard, but using a computer. (wireframe, n.d.)

balsamiq® Wireframes

Figure 12 : Logo of Balsamiq wireframe

2.3 Wireframe:

A Wireframe is a visual schematic that conveys a basic level of communication, structure and behavior during the design of a system. Wireframes are low-fidelity designs that bypass including a detailed user interface or visual design, conveying just enough to get across the core idea. In the case of a website, a wireframe might depict the navigation structure, page layout, content and calls to action. (interaction, n.d.)

Wireframe for index page:

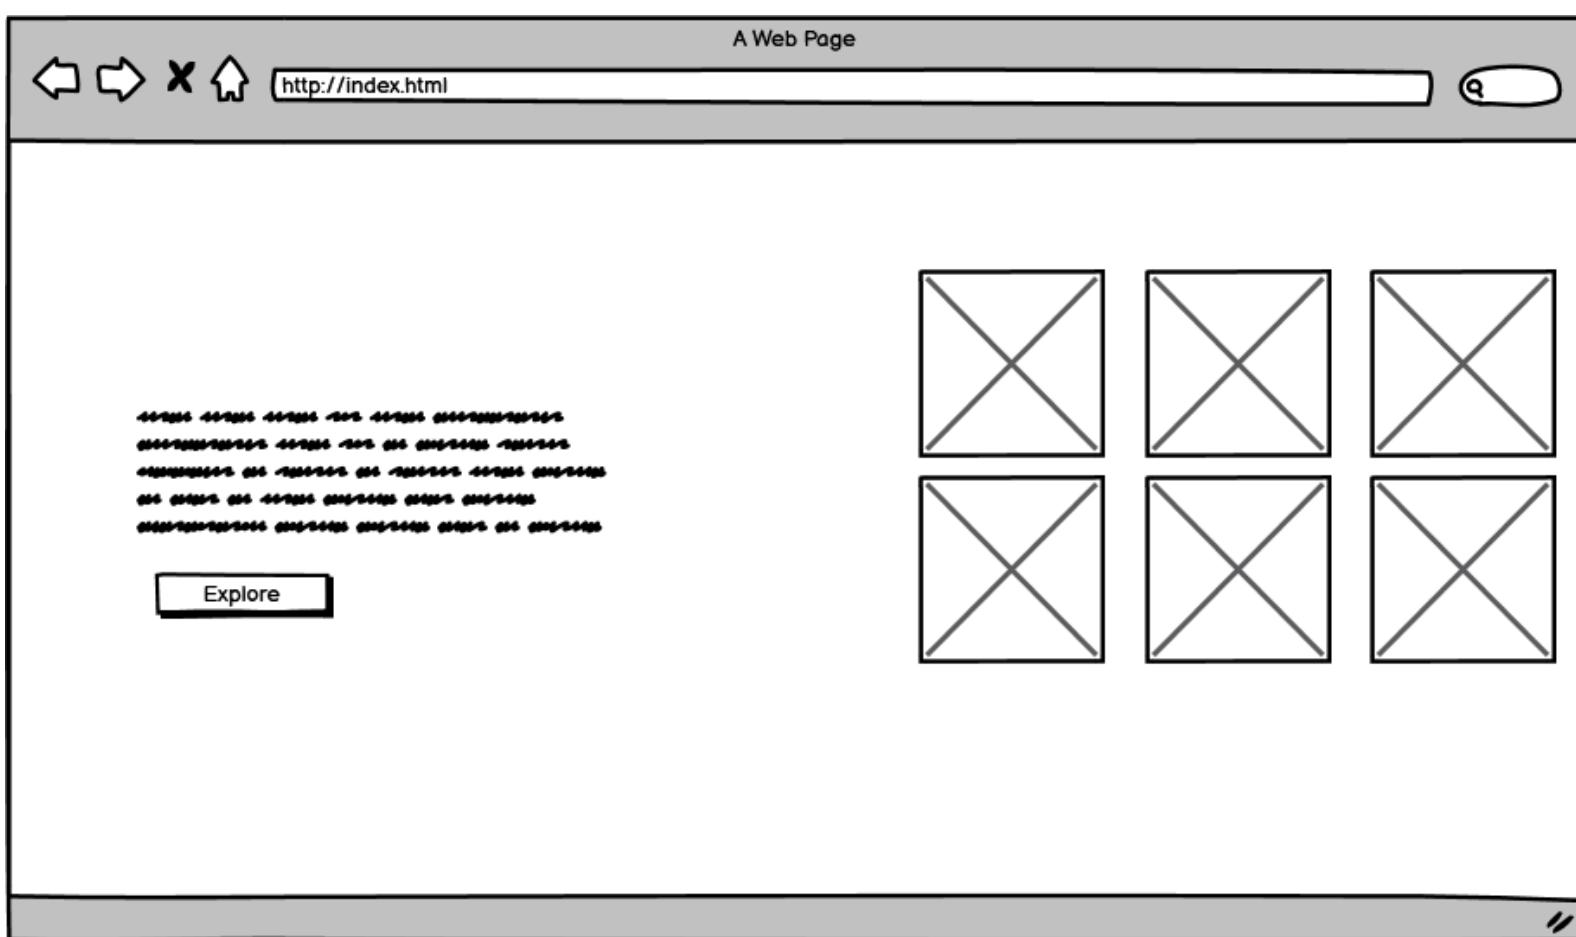

Figure 13 : Wireframe of index page

The index page has 6 icons namely blog icon, shop icon, research icon, about us icon, care icon and event icon. These icons are kept there for future use. Also, it has a explore button which on clicked goes to home page.

Screenshot of index page:

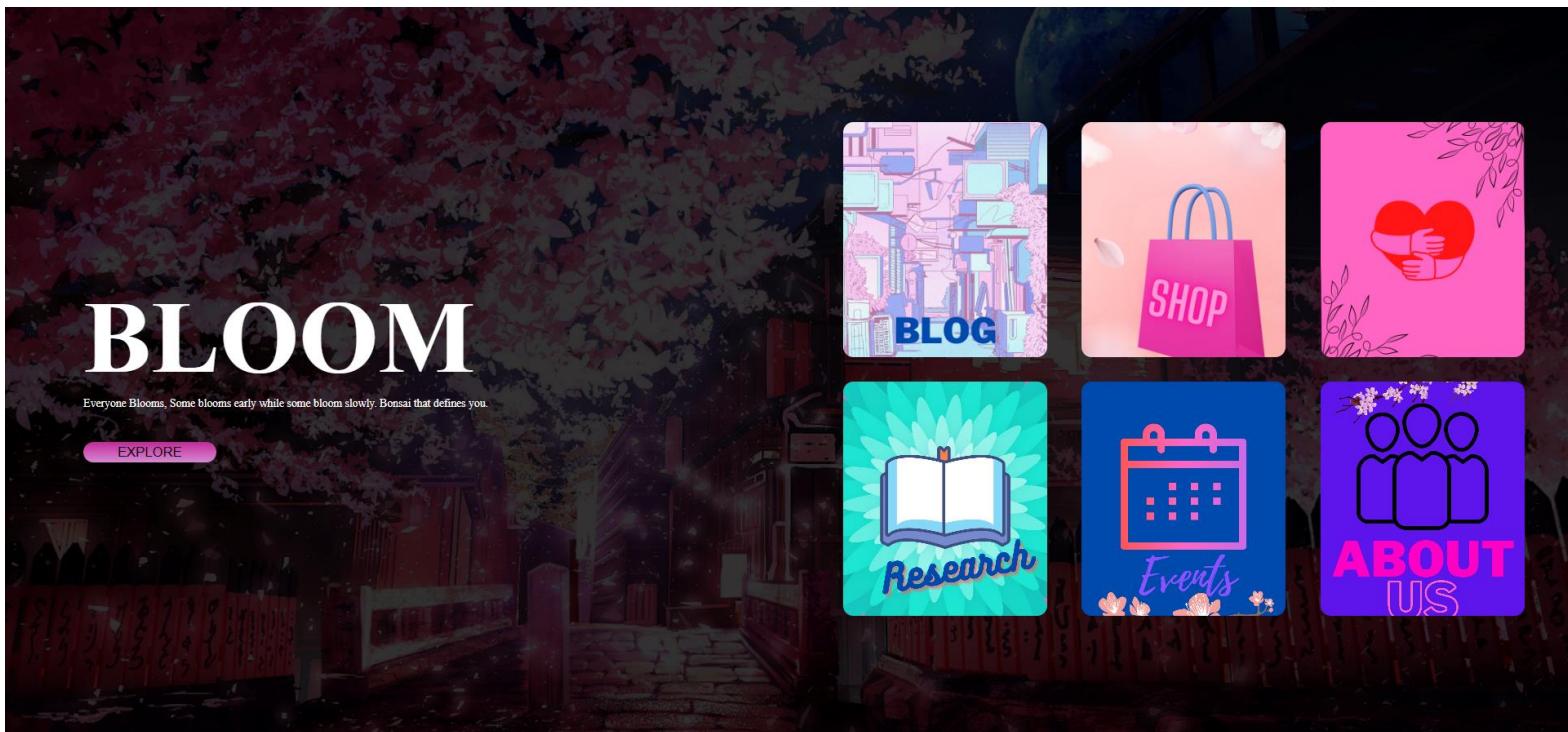

Figure 14 : Screenshot of index page

Wireframe for Home page:

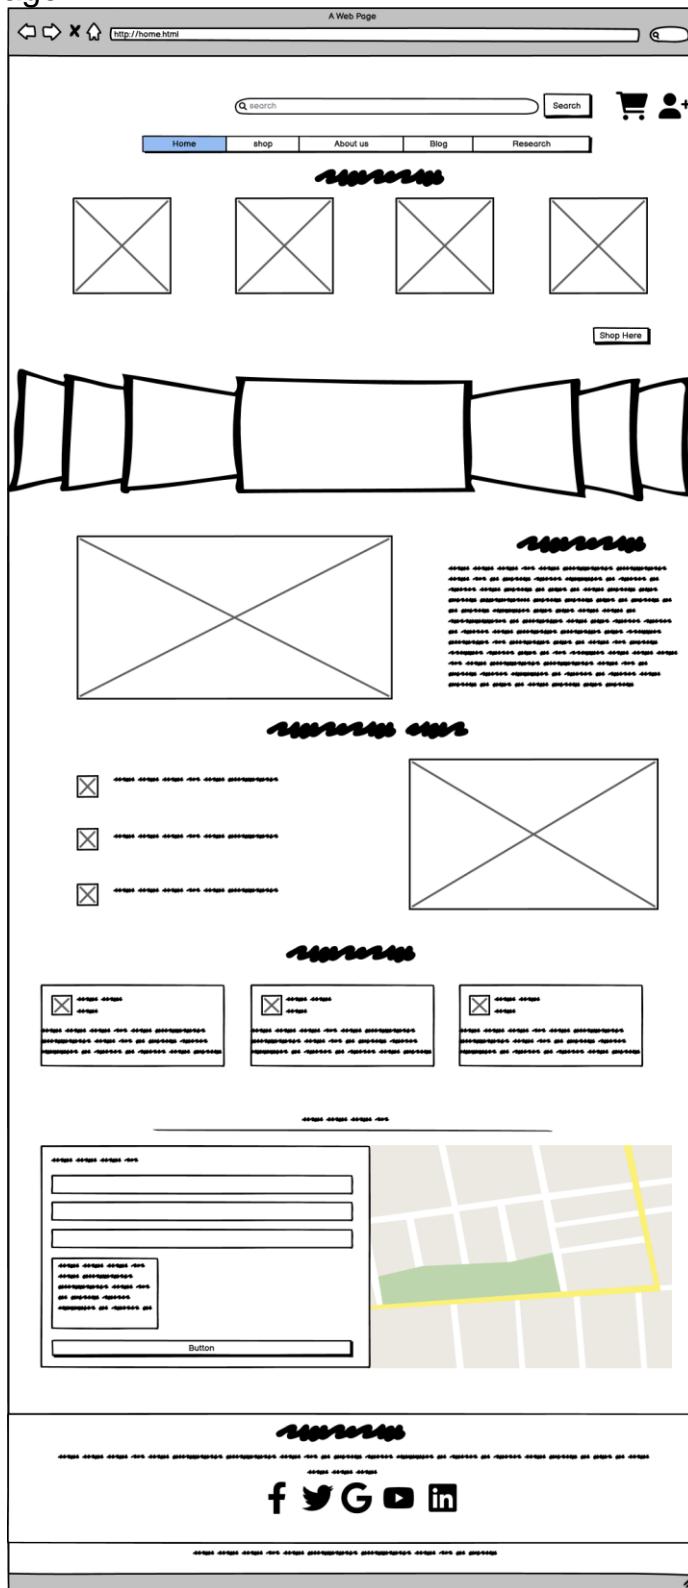

Figure 15 : Wireframe of Home page

The home page consists of a brief description of our product followed by a slider. It also has a description about who we are and the attractive features of our community. Similarly, it consists of a testimonial section and a contact us section. It also has a header with a navigation bar and footer.

Screenshot of Home page:

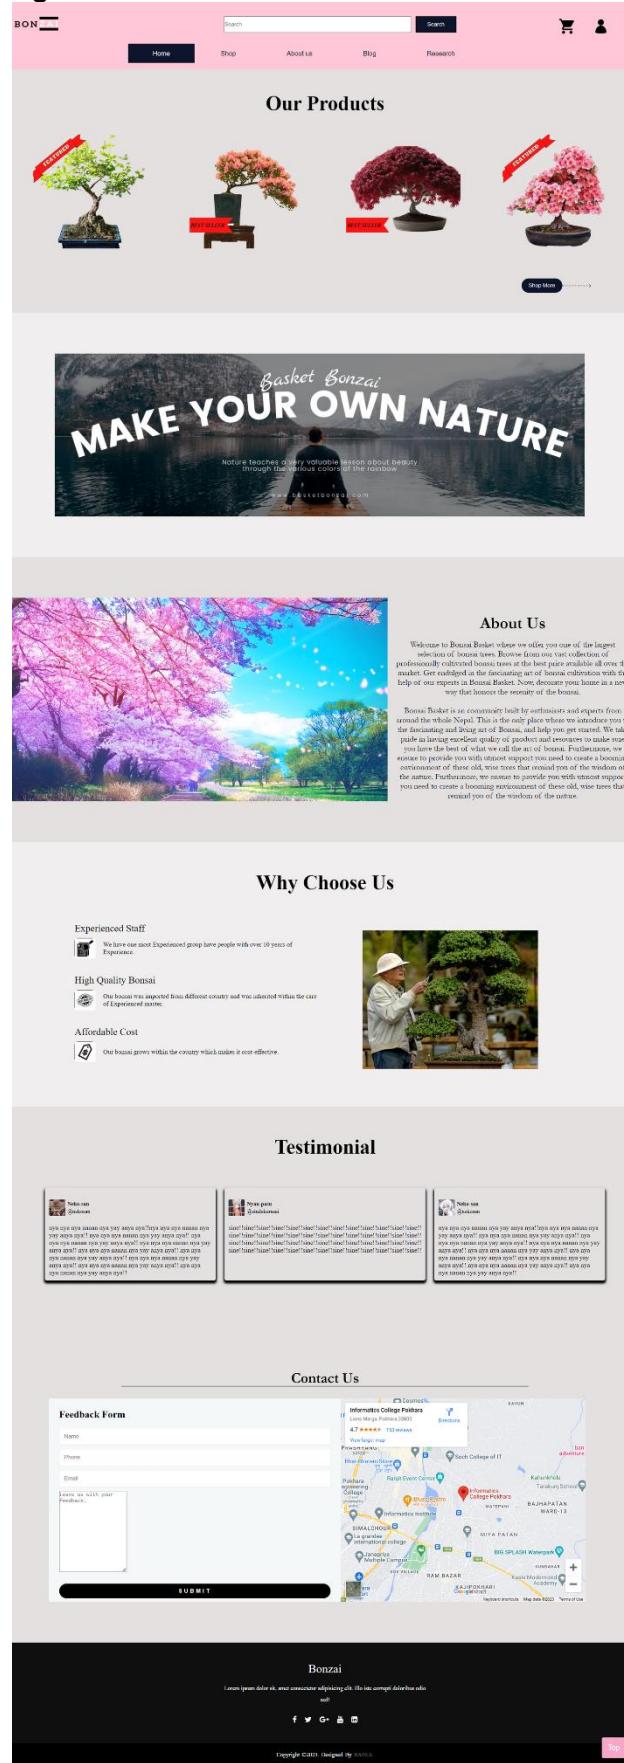

Figure 16 : Screenshot of home page

Wireframe for Shop page:

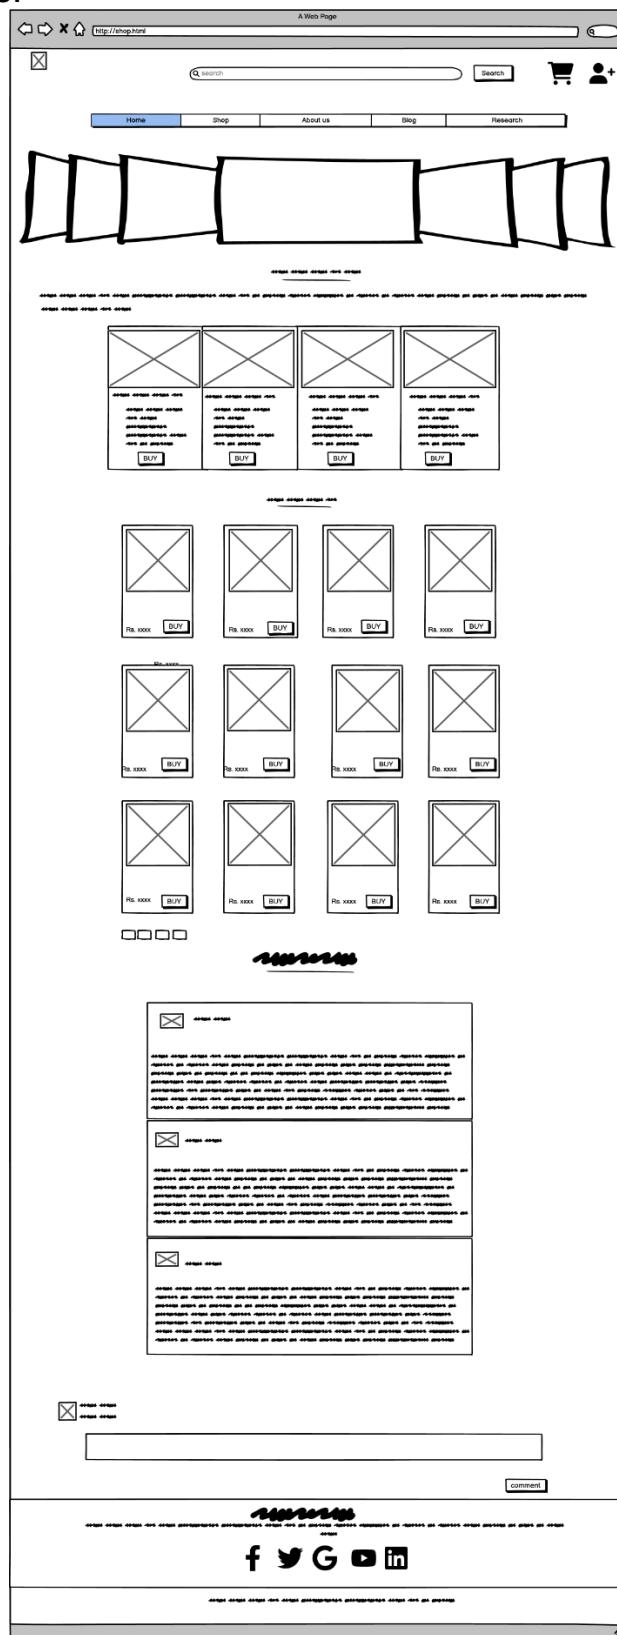

Figure 17 : Wireframe of shop page

The shop page consists of the numbers of product to be sold to the customer with a functional buy button that gives an appropriate message when clicked. The header and footer is similar to that of the home page.

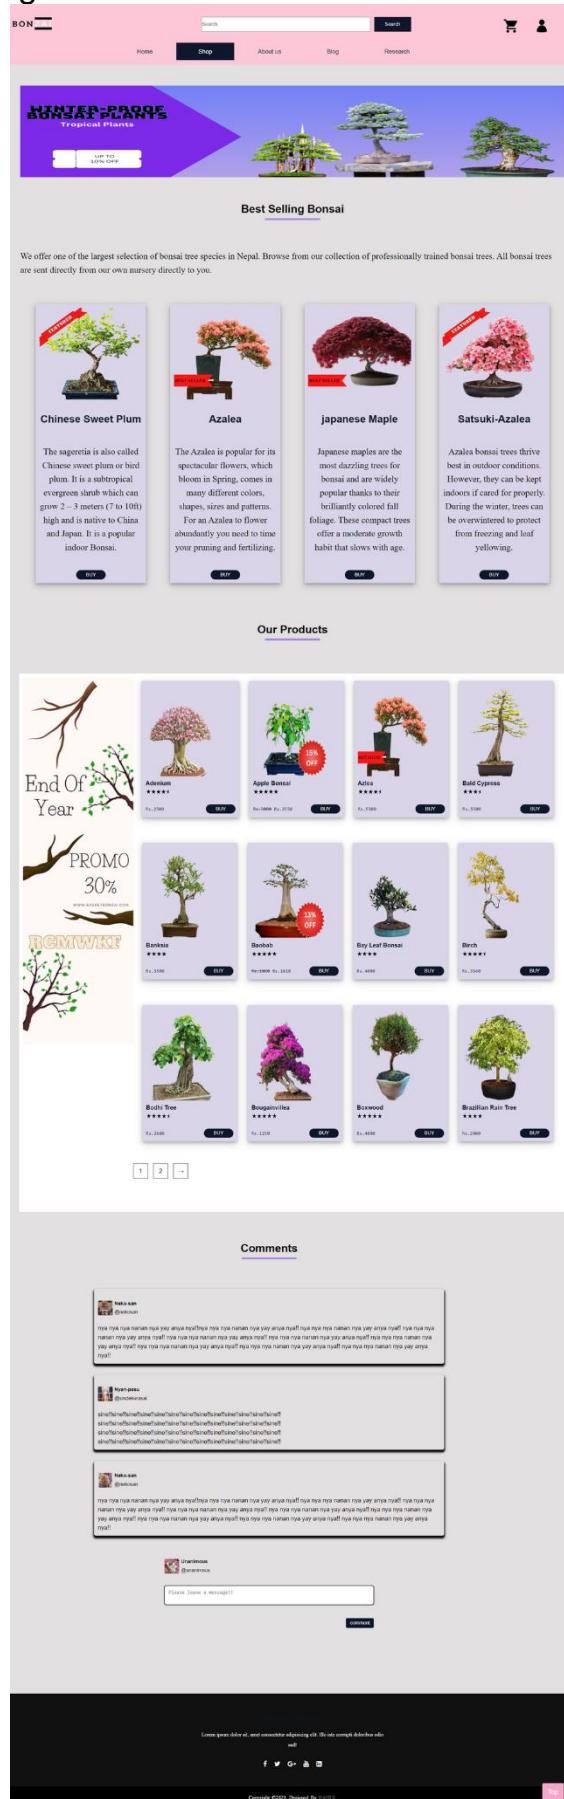

Figure 18 : Screenshot of shop page

Wireframe for About us page:

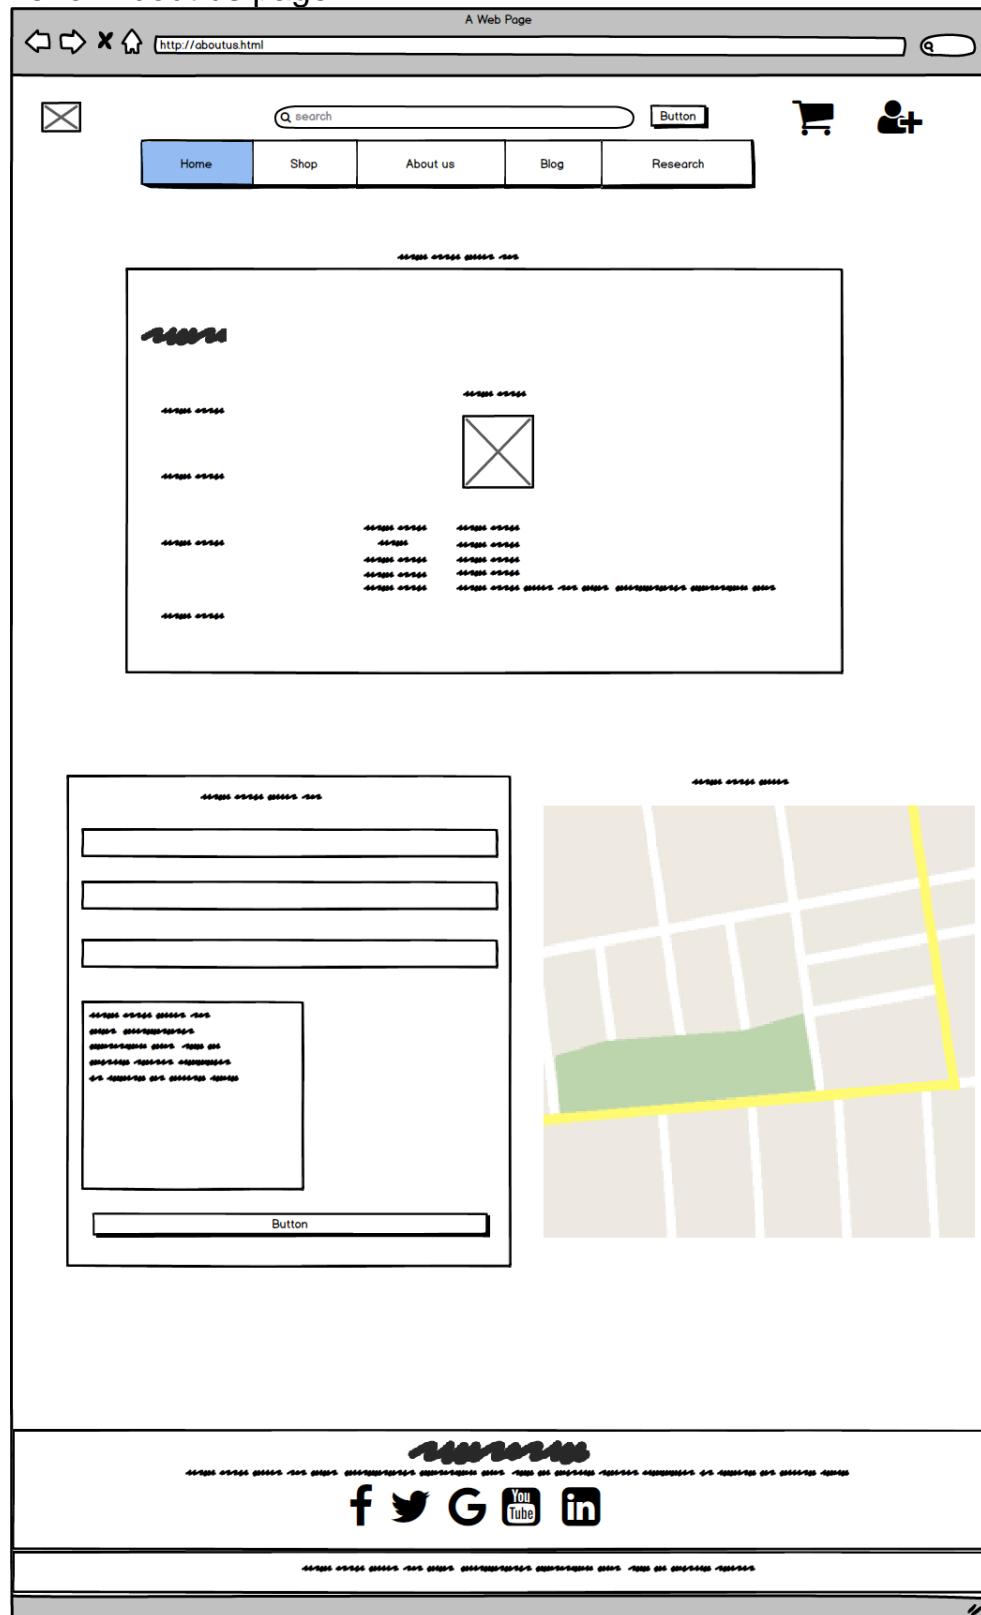

Figure 19 : Wireframe of about us page

The about us page consists of the same header and footer as that of home page. It also consists of a functional vertical tab which has a short portfolio of all members of our group. Similarly, it has a contact us form and a map for our location.

Screenshot of About us page:

About us

Prabal	Prabal Gurung  Name: Prabal Gurung Age: 19 yrs old Email: abcde@gmail.com Education level: Currently studying at ICP Skills: Leadership, Verbal and written Communication and programming ability in java and javascript.

Figure 20 : Screenshot of about us page

Wireframe for Blog page:

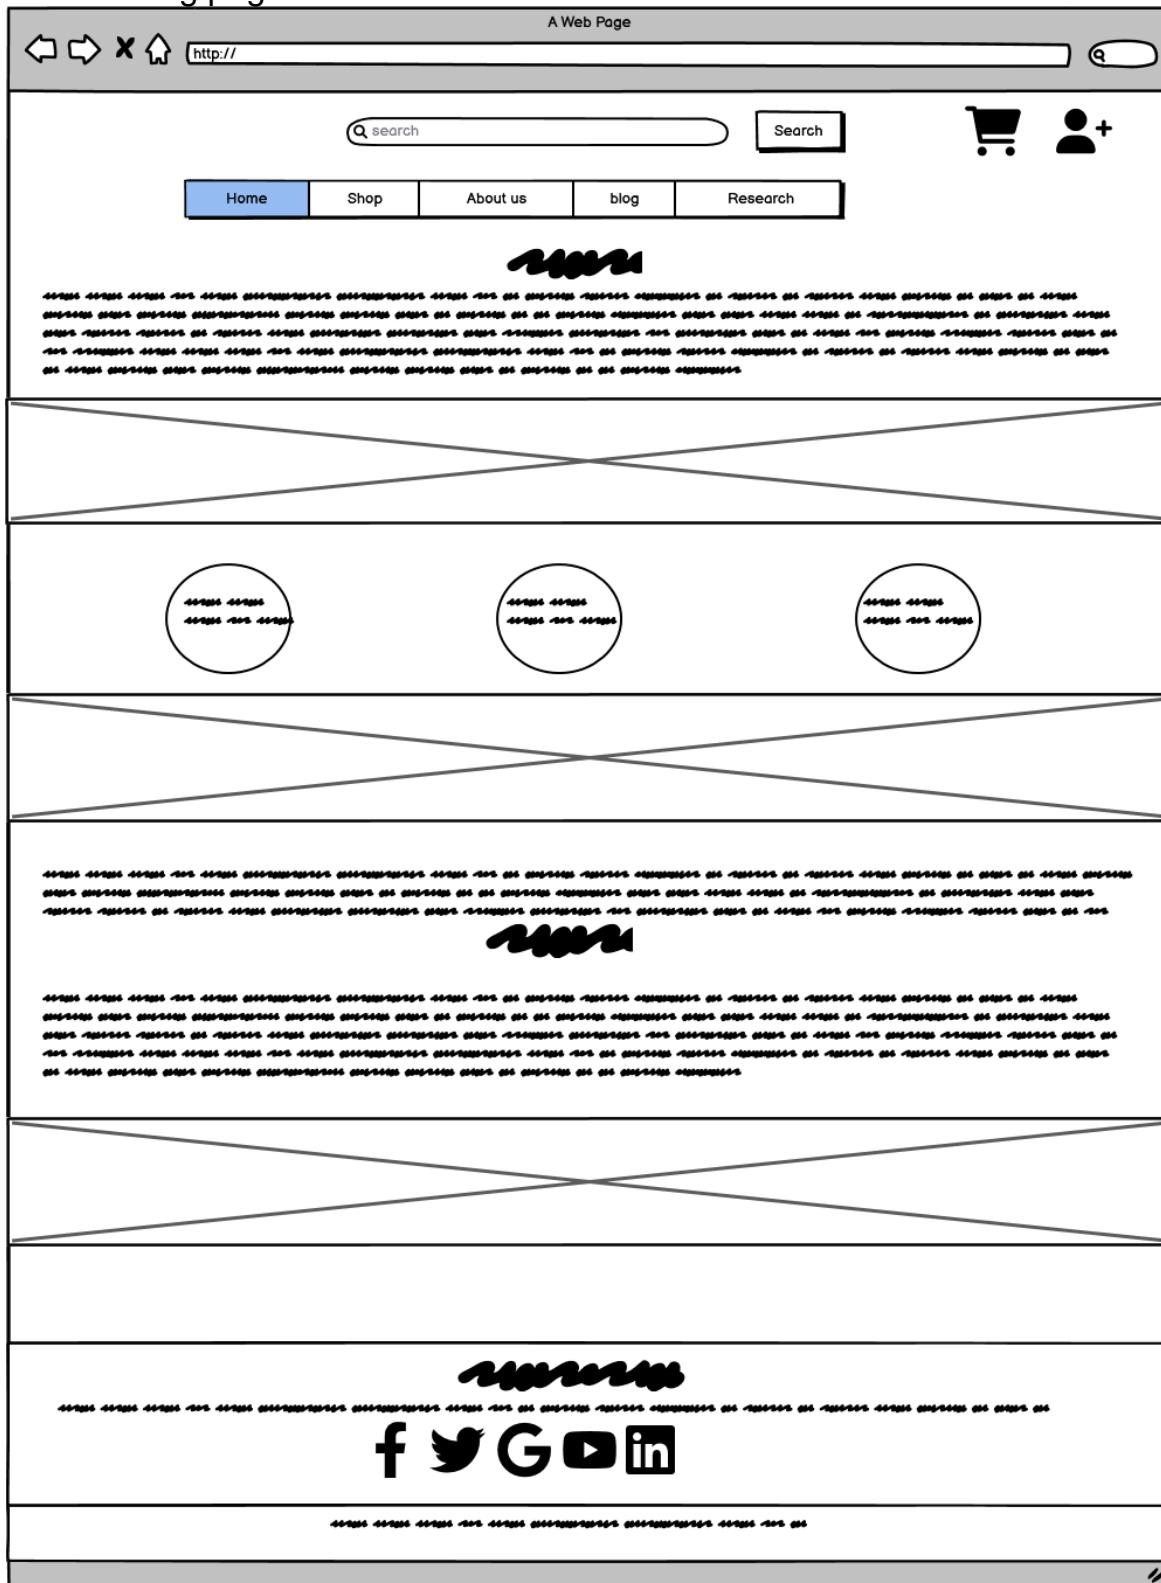

Figure 21 : Wireframe of blog page

The blog page also consists of a similar header and footer as that of home page. This page consists of a brief description of how technology has affected our daily life along with an image in the background.

Screenshot of blog page:

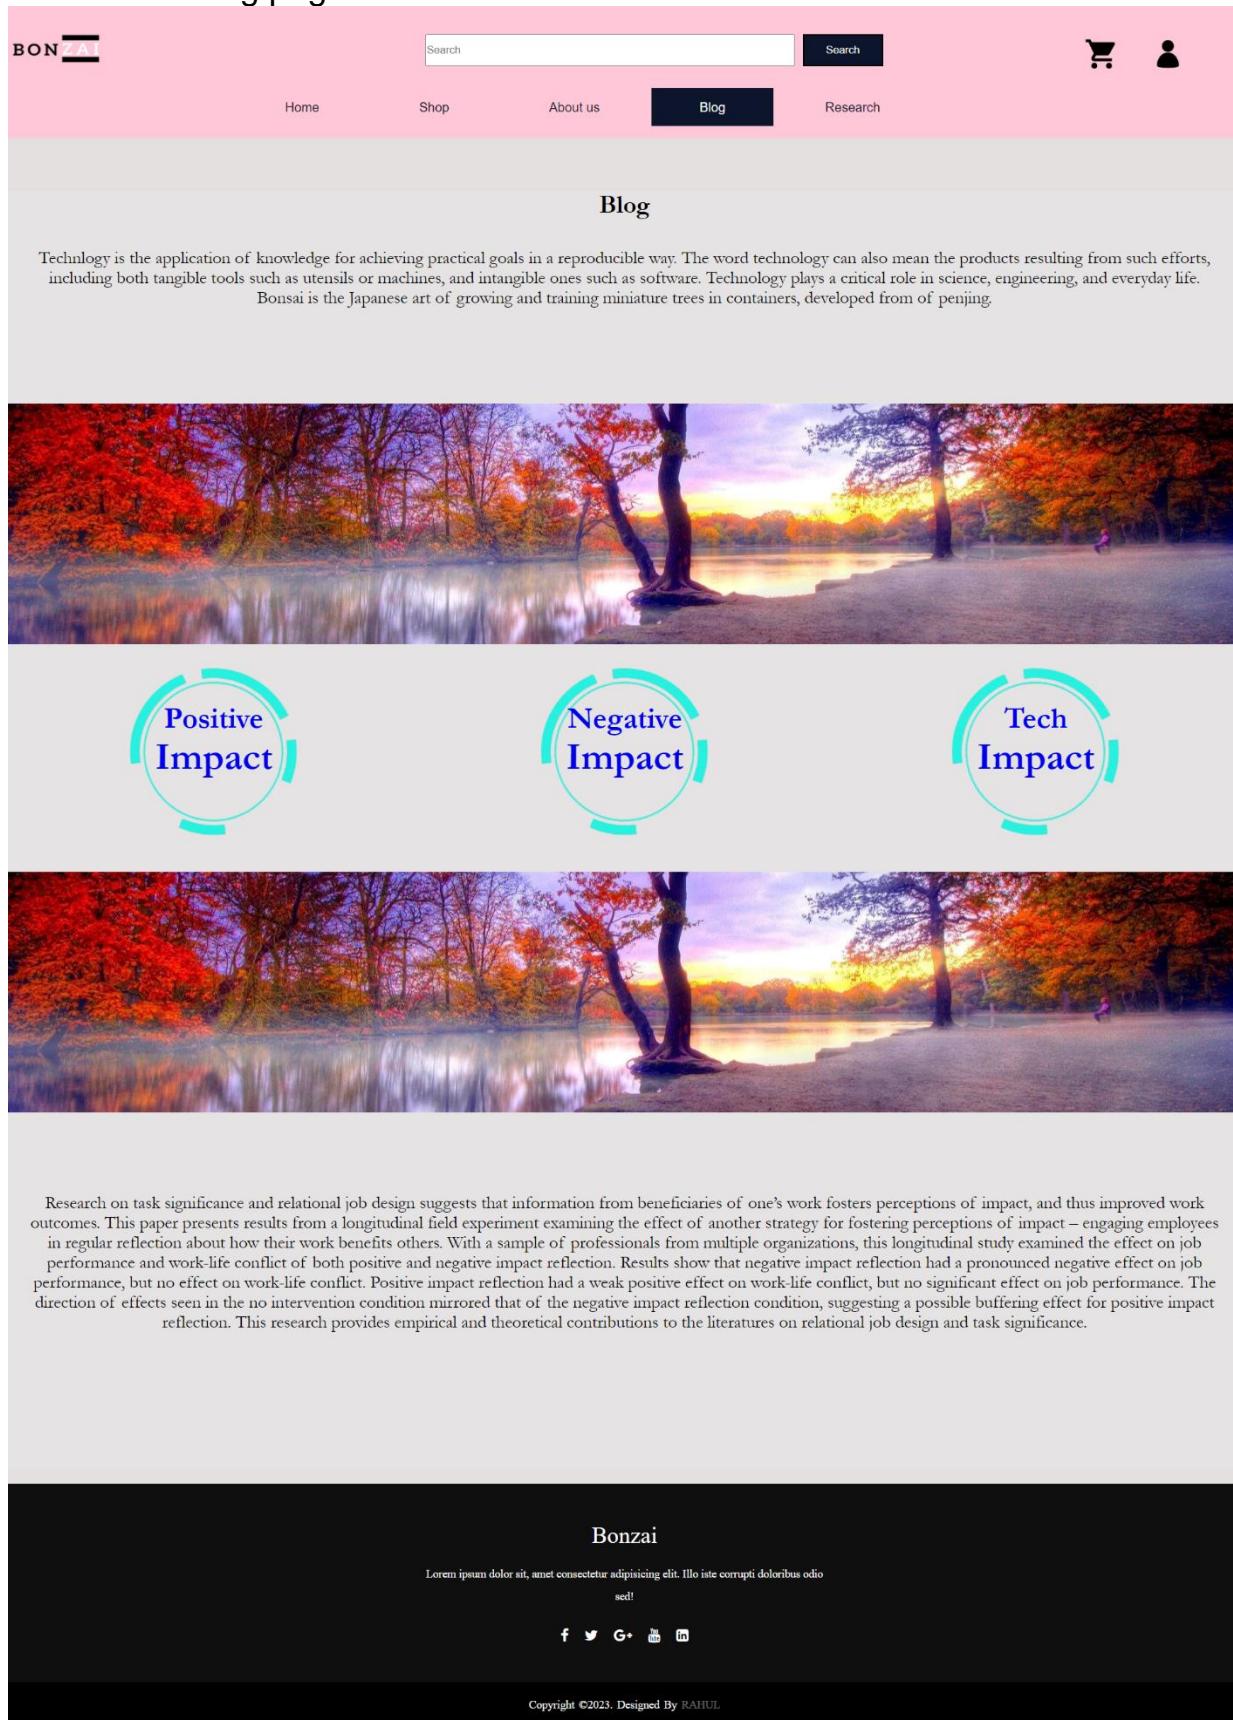

Figure 22 : Screenshot of blog page

Wireframe for Research page:

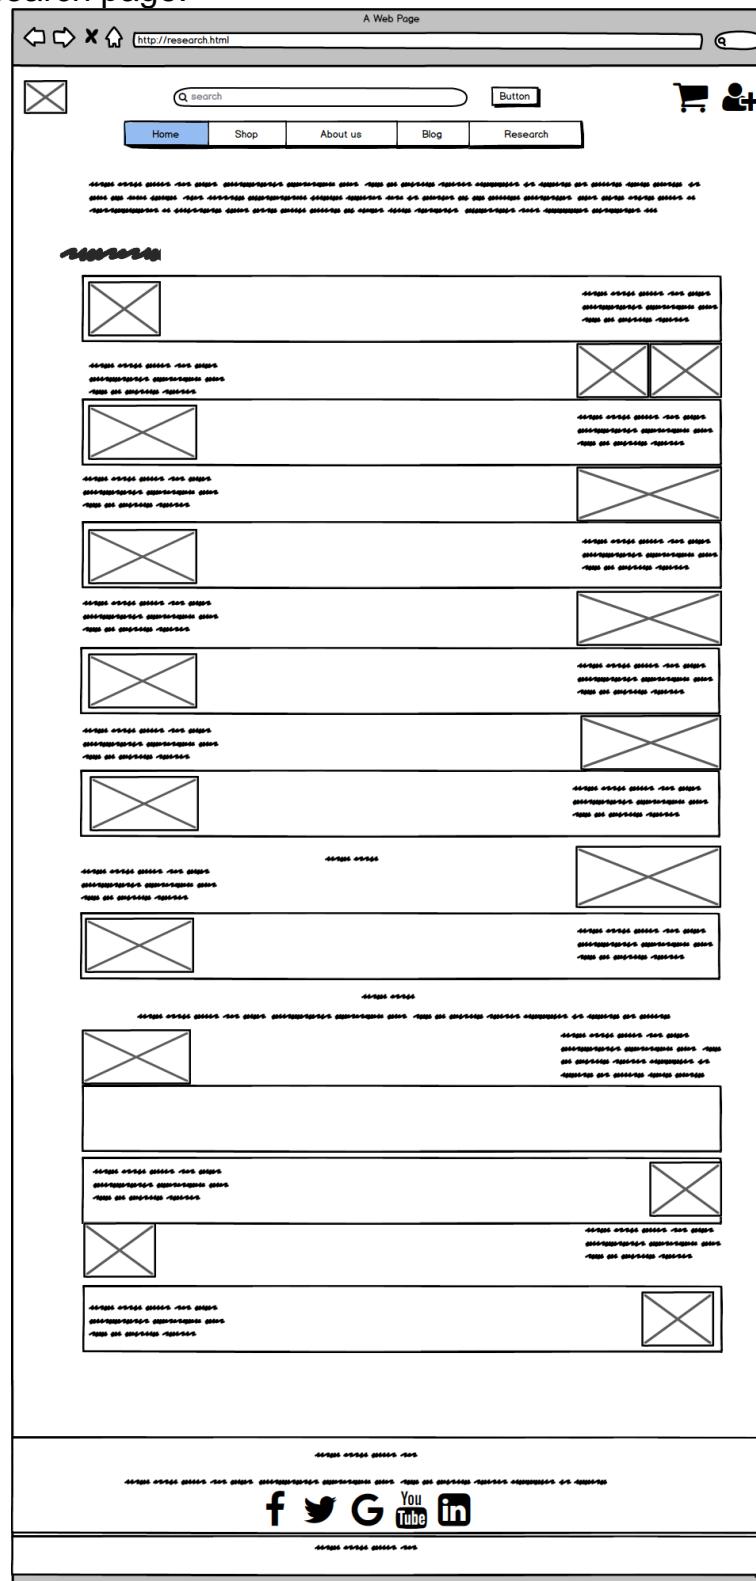

Figure 23 : Wireframe of research page

The research page consists of the same header and footer as that of home page. It consists of the URL link to all the referenced websites that we took while designing along with their author, date accessed and the title of the referenced website.

Screenshot of Research page:

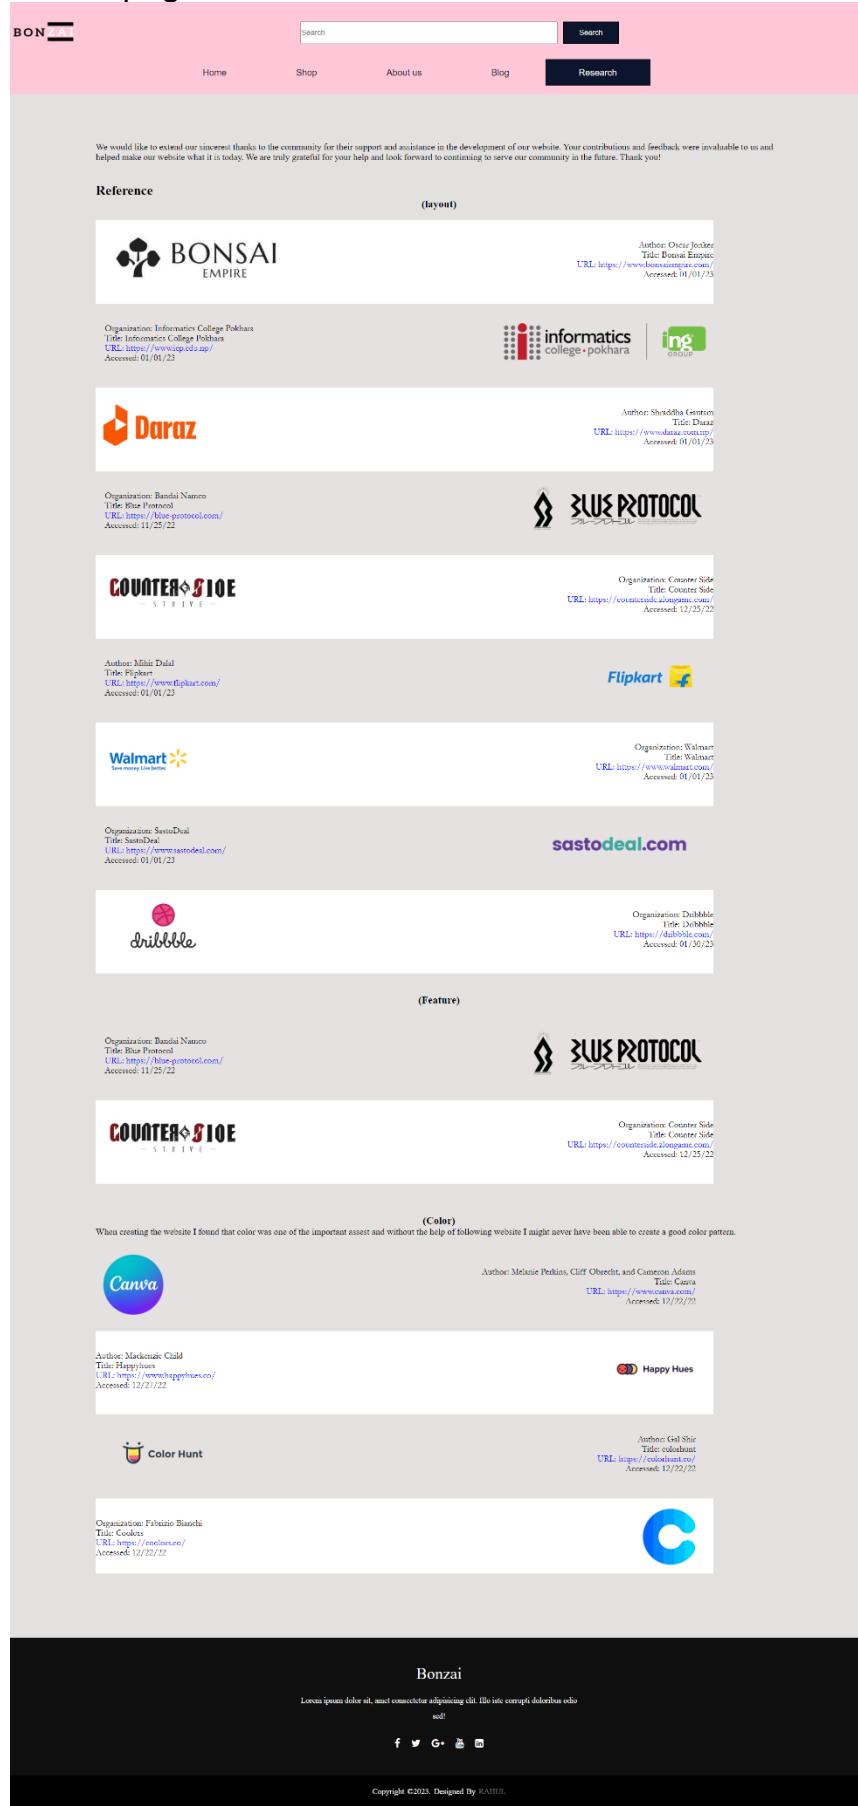

Figure 24 : Screenshot of research page

3. Testing

3.1 Testing of Scroll to top button (JS testing)

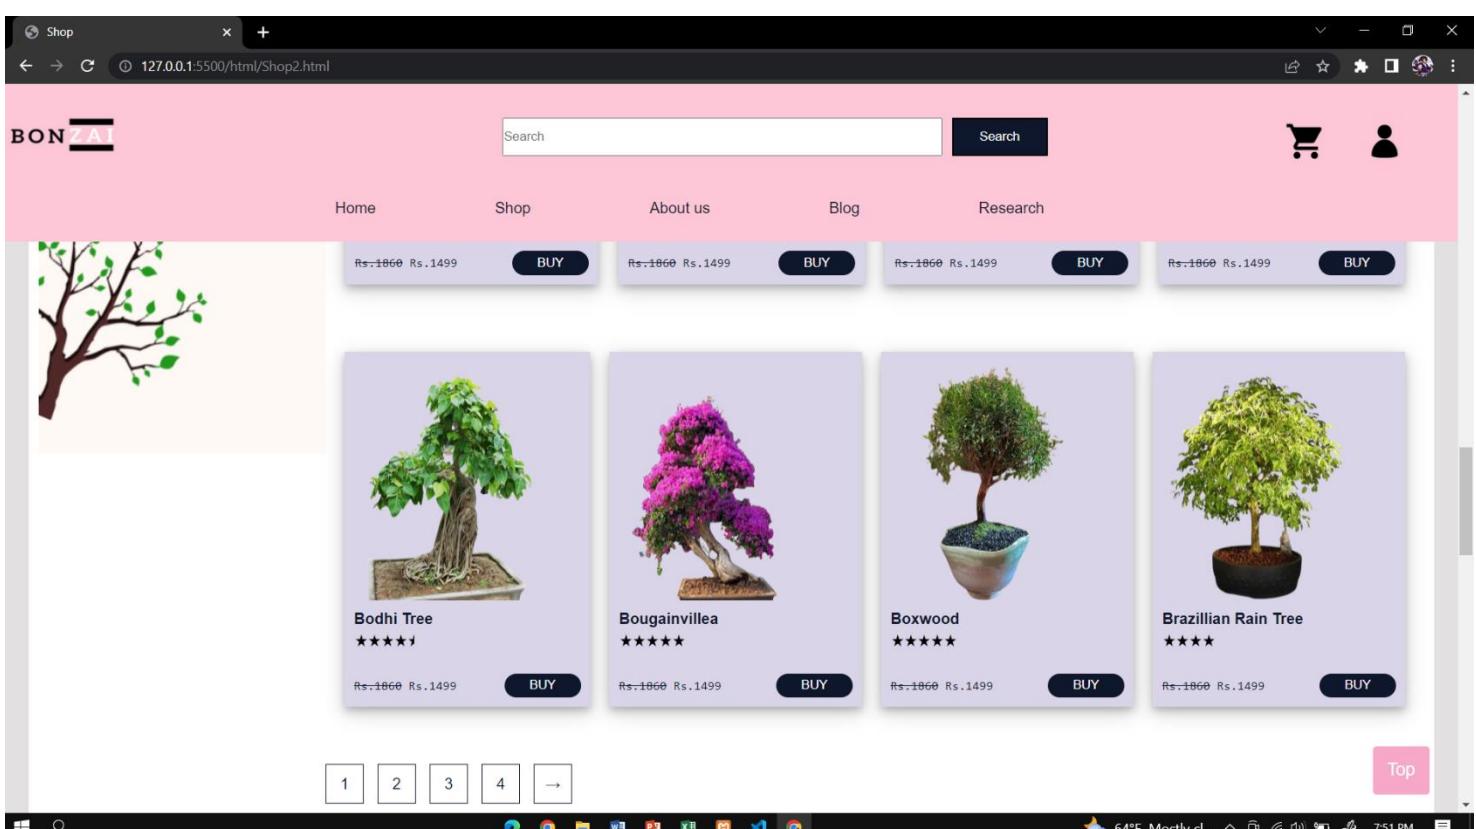

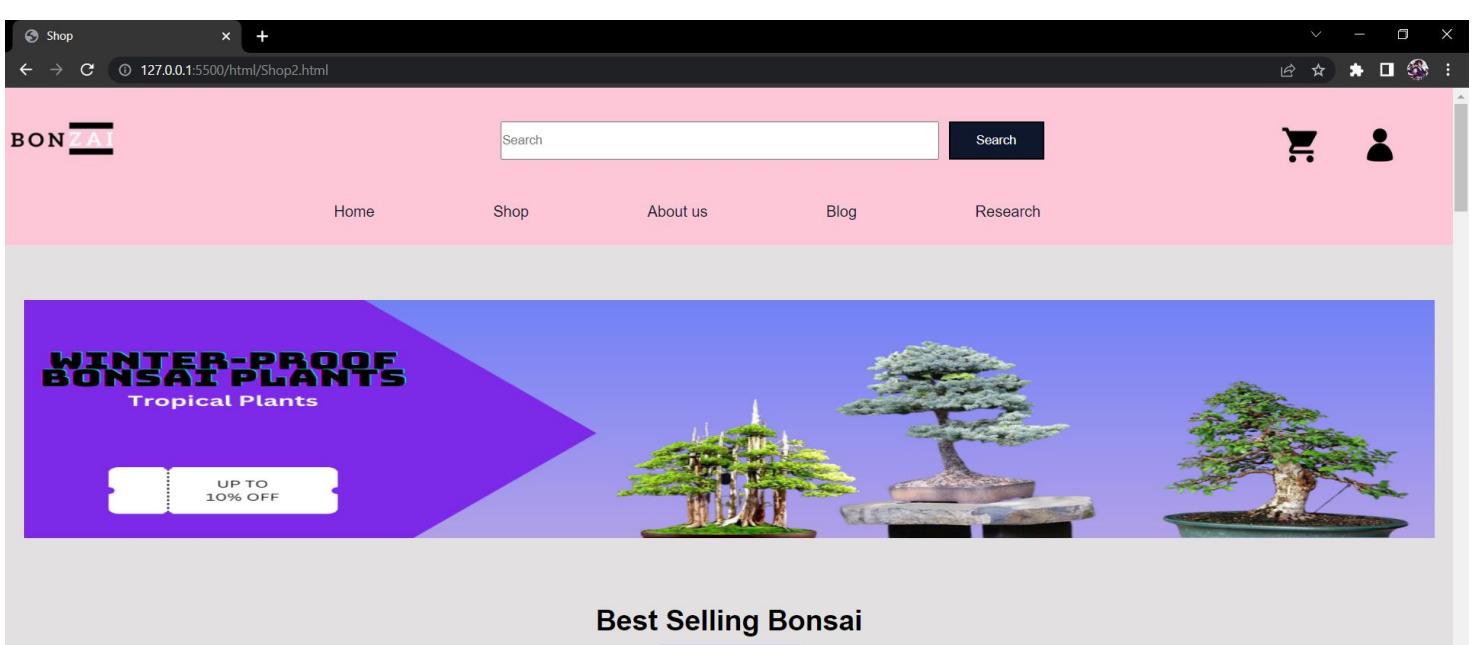

Figure 25 : Before clicking on scroll to top button

We offer one of the largest selection of bonsai tree species in Nepal. Browse from our collection of professionally trained bonsai trees. All bonsai trees are sent directly from our own nursery directly to you.

Figure 26 : After clicking on scroll to top button

Objectives	To check if the scroll to top button is working properly or not.
Action	Scroll the shop page downwards.
Expected Outcomes	The scroll to top button should appear and it should scroll to top of the shop page on click.
Actual Output	The scroll to top button appears and it scrolls to top of the page on click.
Conclusion	Test Successful

Table 1 : Test 1 for scroll to top button.

3.2 Testing of form validation (JS testing)

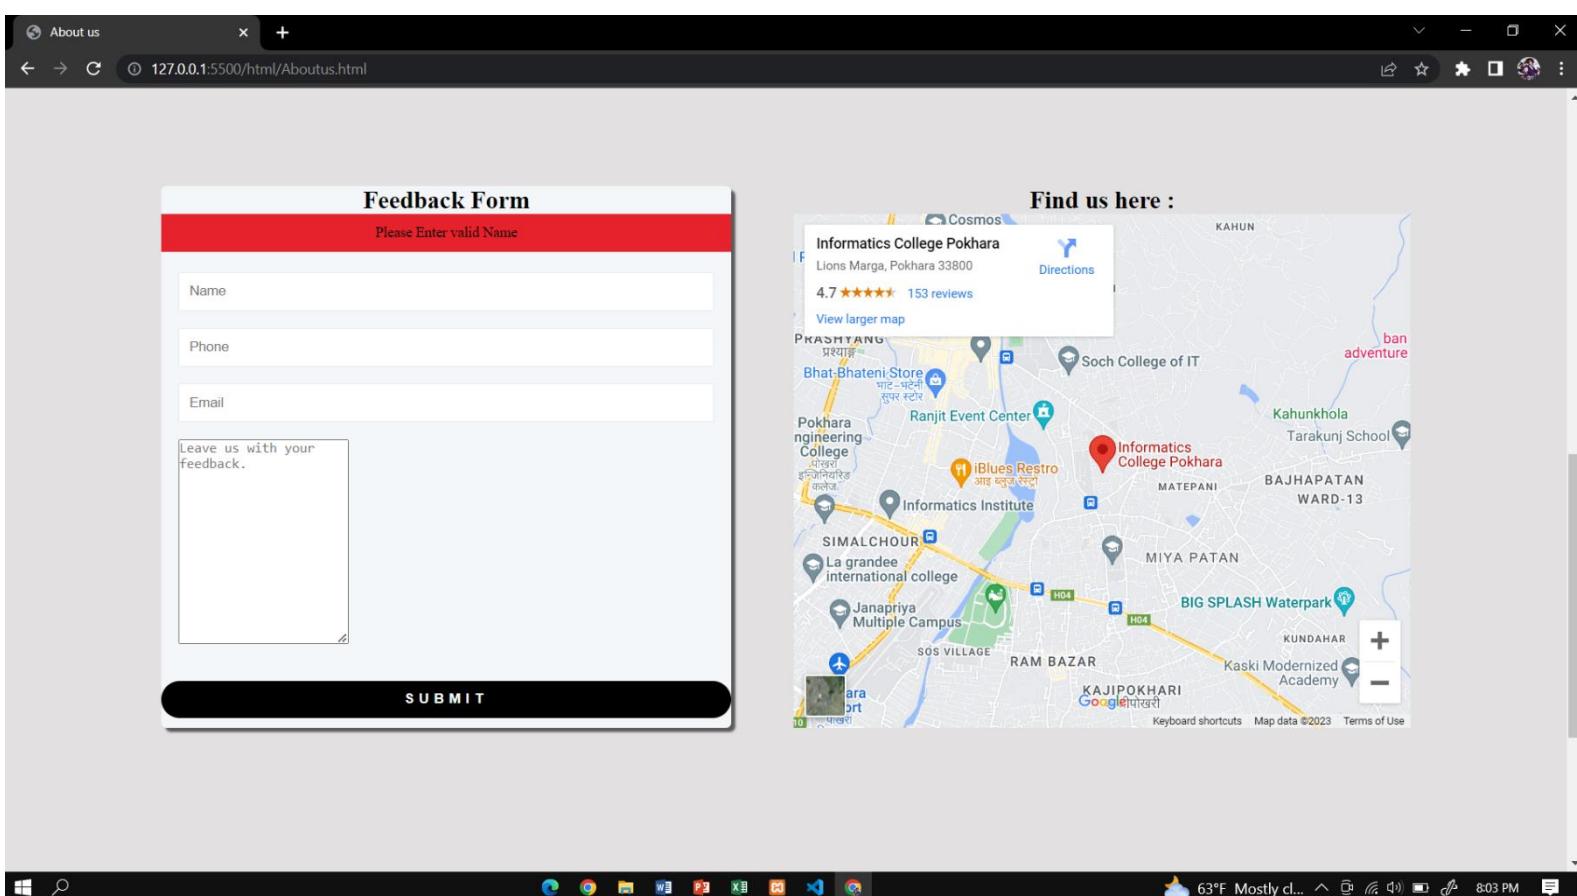

Figure 27 : Form validation before filling details

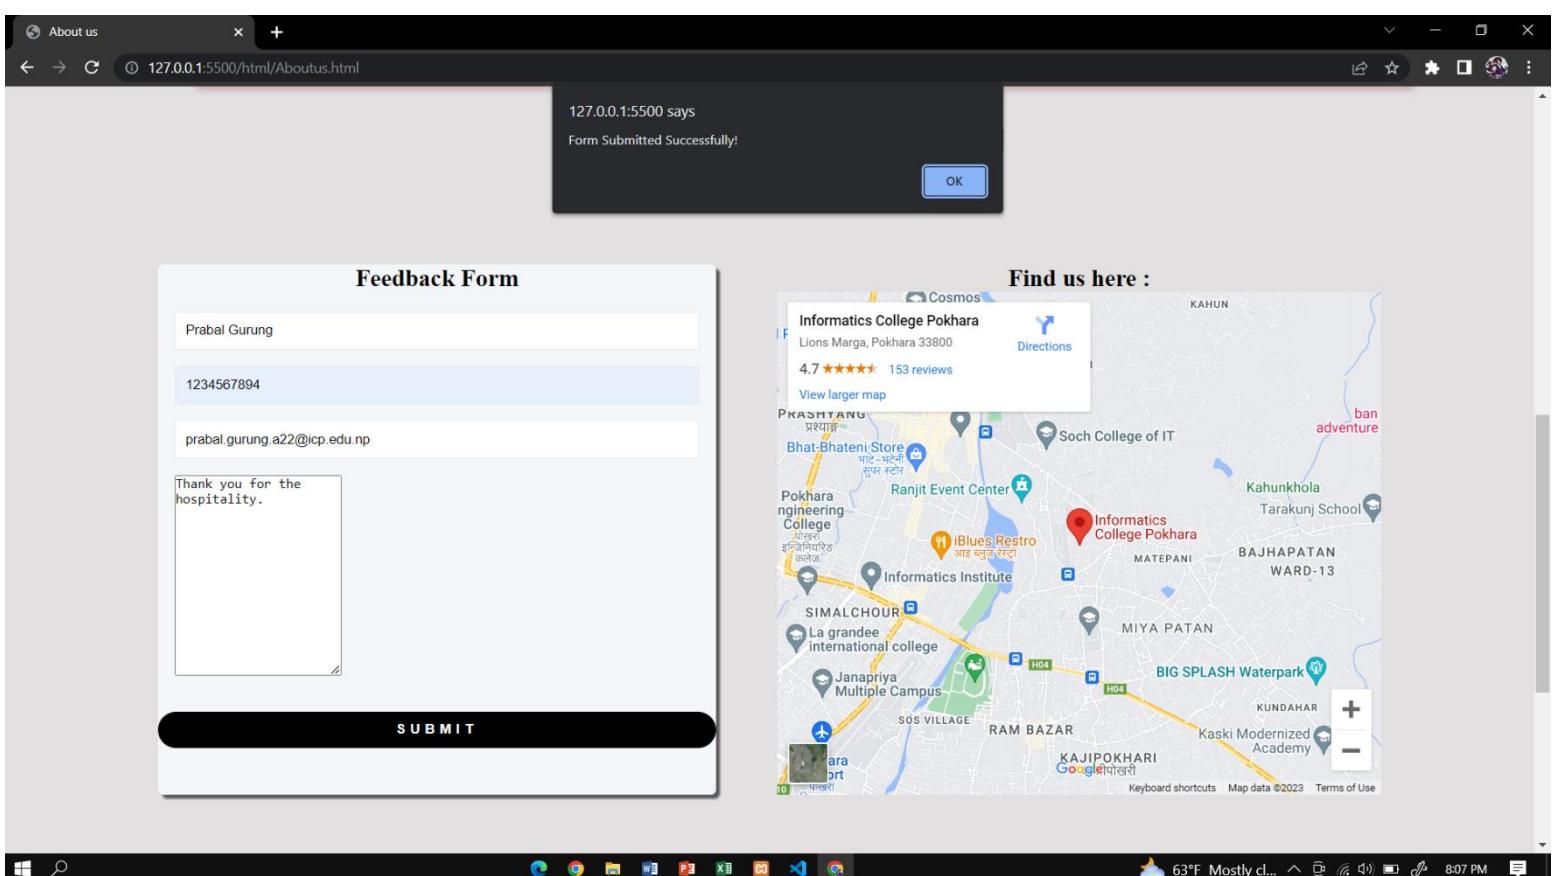

Figure 28 : Form validation after filling the required details

Objectives	To check if JavaScript for form validation is working properly or not.
Action	Click the submit button without filling the details on the form.
Expected Outcomes	The form should display message with appropriate annotation.
Actual Output	The form displays message with appropriate annotation
Conclusion	Test Successful

Table 2 : Test 2 for form validation

3.3 Testing of buy button (JS testing)

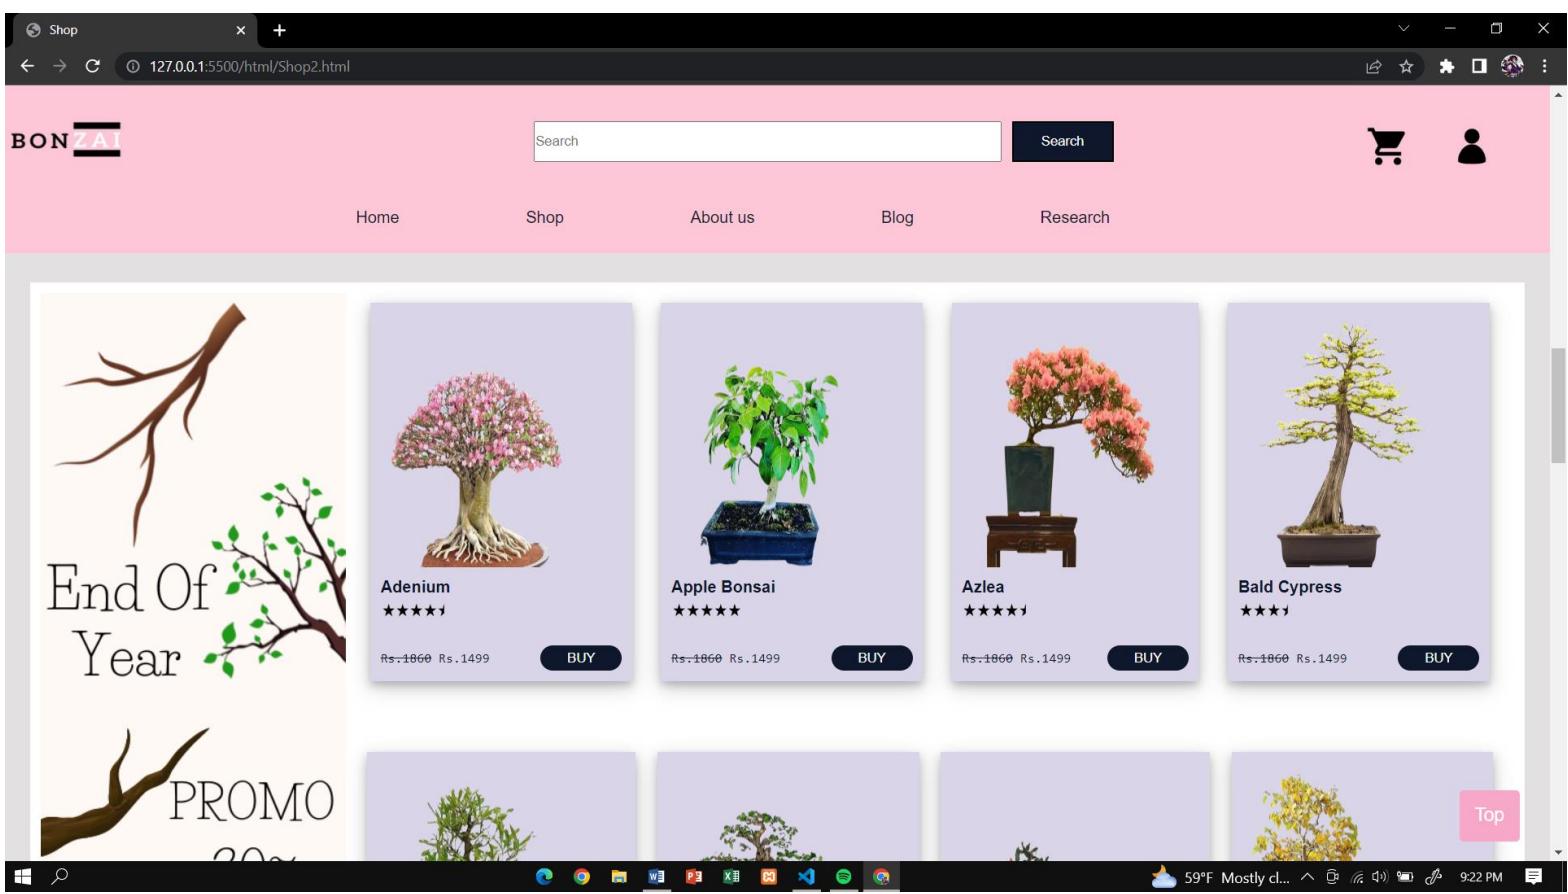

Figure 29 : Before testing the buy button on shop page

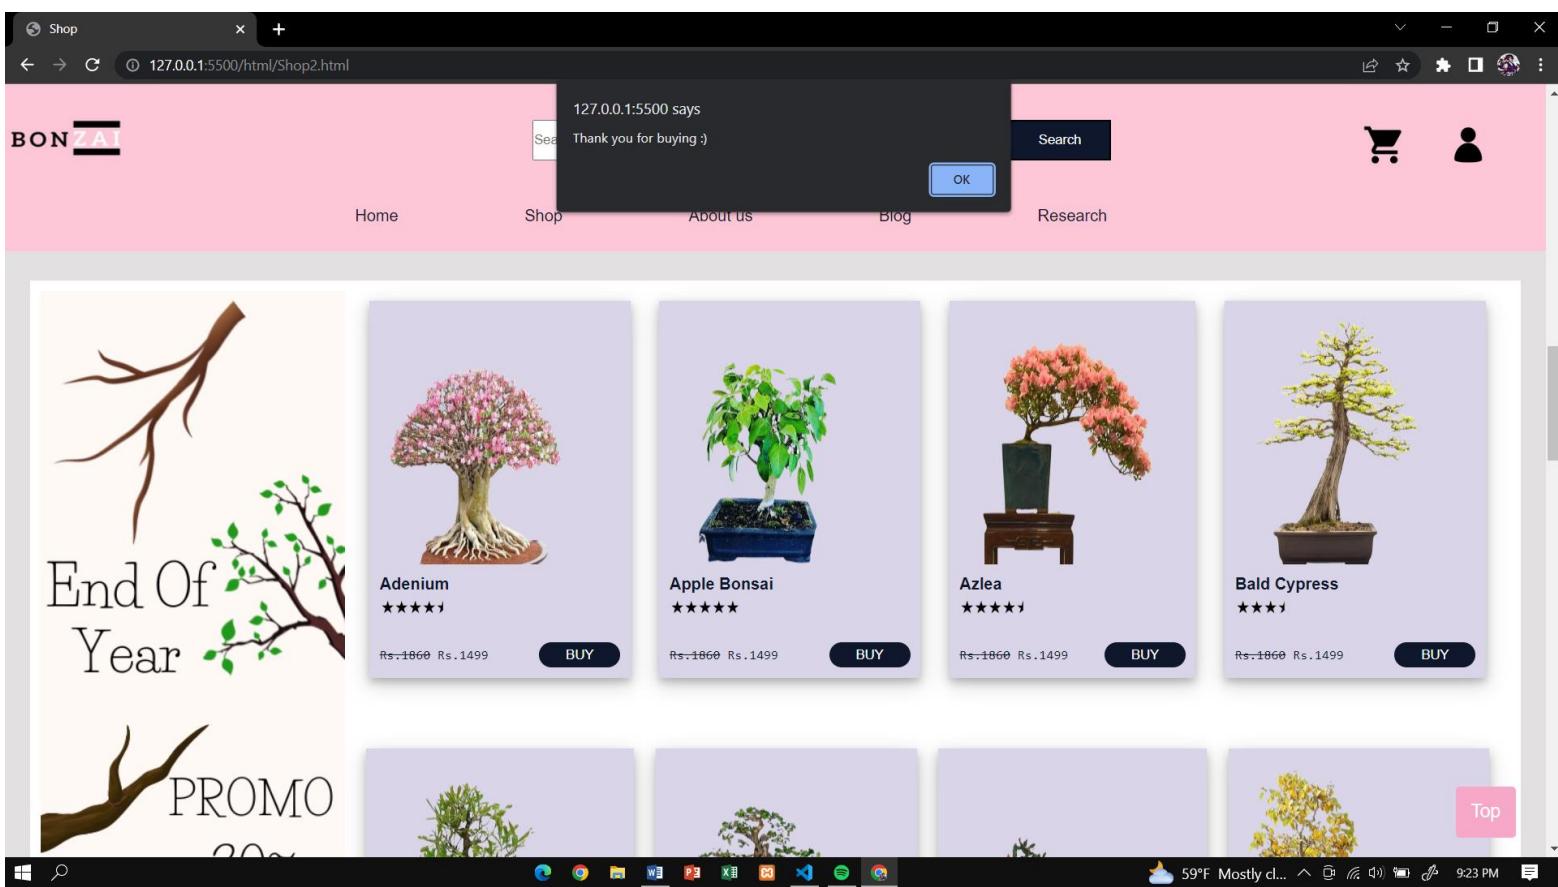

Figure 30 : After testing the buy button

Objectives	To check if JavaScript for the buy button is implemented properly or not.
Action	Click the buy button on the shop.
Expected Outcomes	A pop-up message should be seen with appropriate message.
Actual Output	A pop-up message is seen.
Conclusion	Test Successful

Table 3 : Test 3 to check the buy button

3.4 Testing of nav hover effect

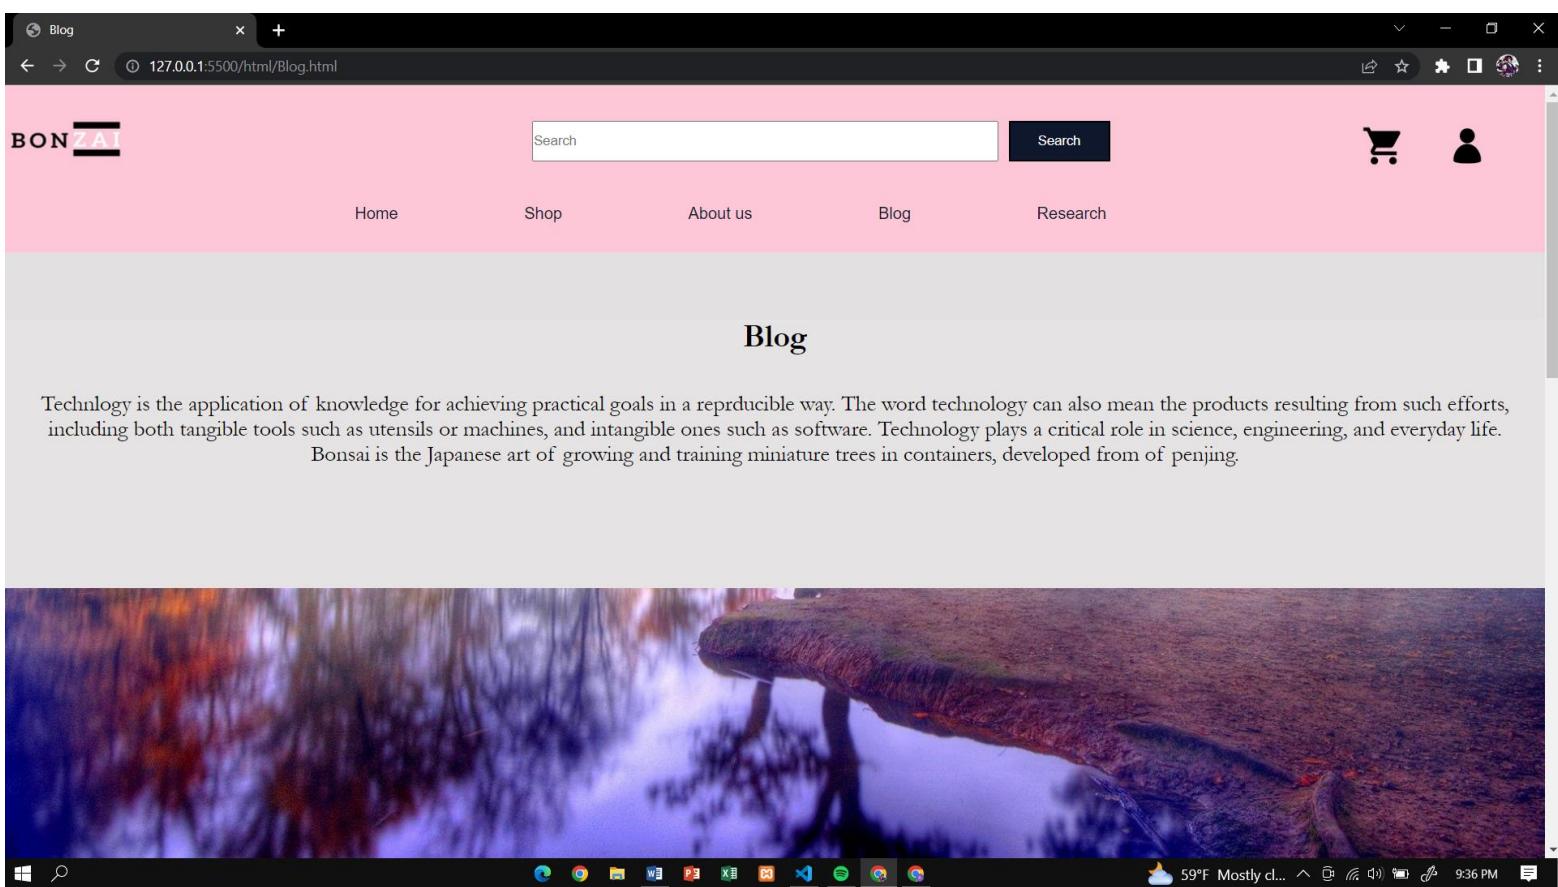

Figure 31 : Nav bar in blog page before hover

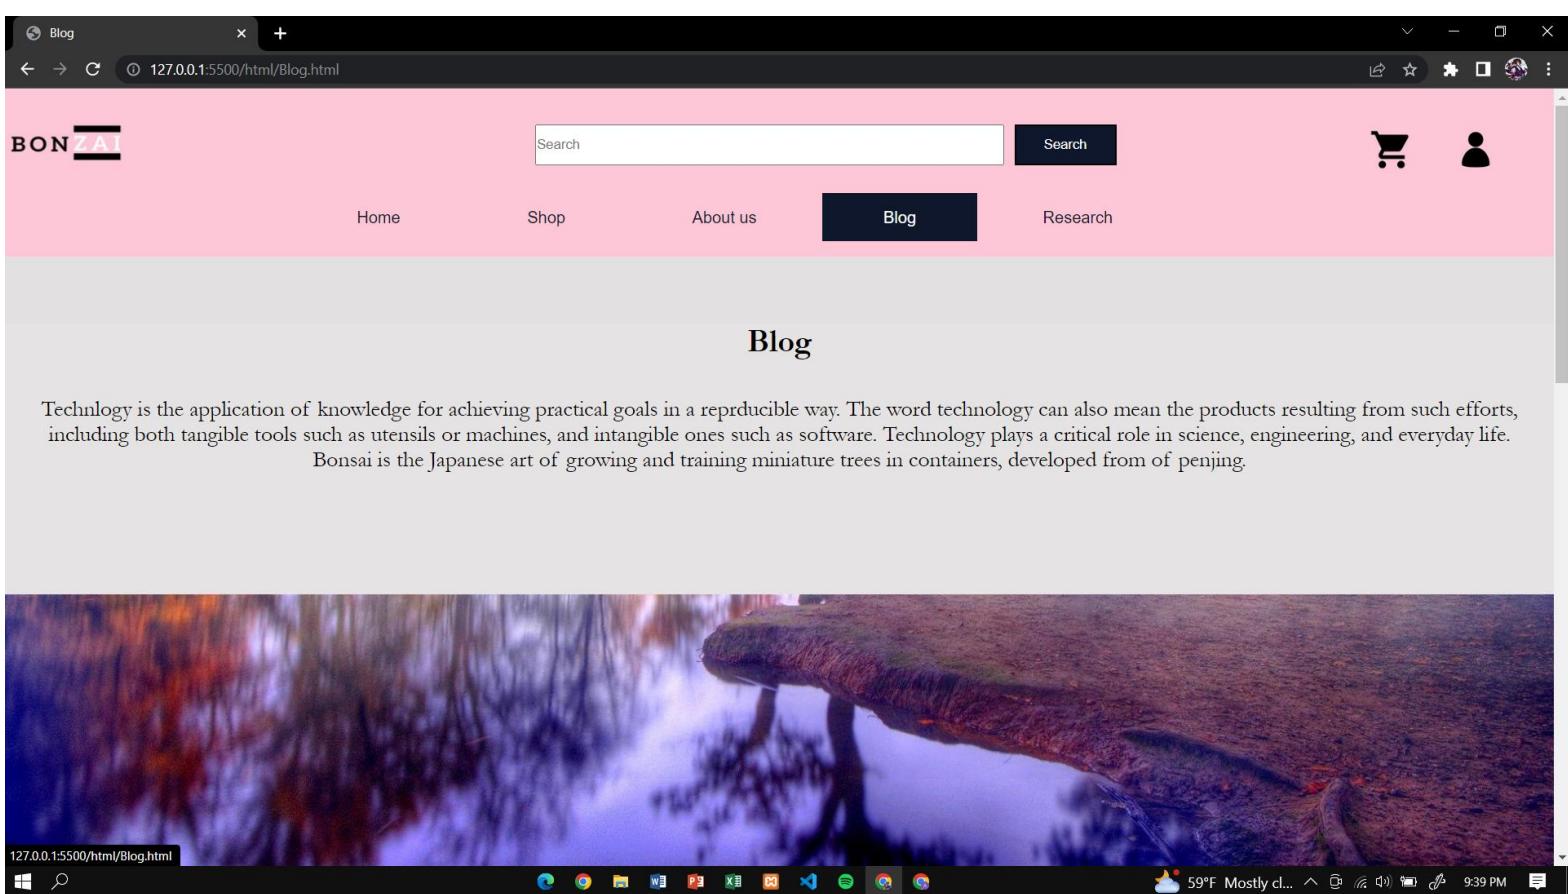

Figure 32 : Nav bar in blog page after hover

Objectives	To check if hover effect in the nav bar is implemented properly or not.
Action	Hover over the nav bar.
Expected Outcomes	The nav bar should be implemented with hover effect according to the implemented CSS.
Actual Output	The hover effect is implemented properly.
Conclusion	Test Successful

Table 4 : Test 4 to check the hover effect in nav bar

3.5 Testing for internal and external link

The screenshot shows a web browser window with the URL 127.0.0.1:5500/html/Aboutus.html. The page has a pink header with the logo "BONZAI". A search bar and a "Search" button are at the top right. Below the header, there are navigation links: Home, Shop, About us, Blog, and Research. The main content area is titled "Members of Bonsai Basket". It lists three team members: Prabal, Prabin, and Rahul. The "Prabal" entry is highlighted with a gray background. To the right of Prabal's name is a small thumbnail image of him sitting on a blue chair. Below the thumbnail, his details are listed: Name: Prabal Gurung, Age: 19 yrs old, Email: abcde@gmail.com. The browser taskbar at the bottom shows various open tabs and system icons.

Figure 33 : Test of internal link before clicking on the research page

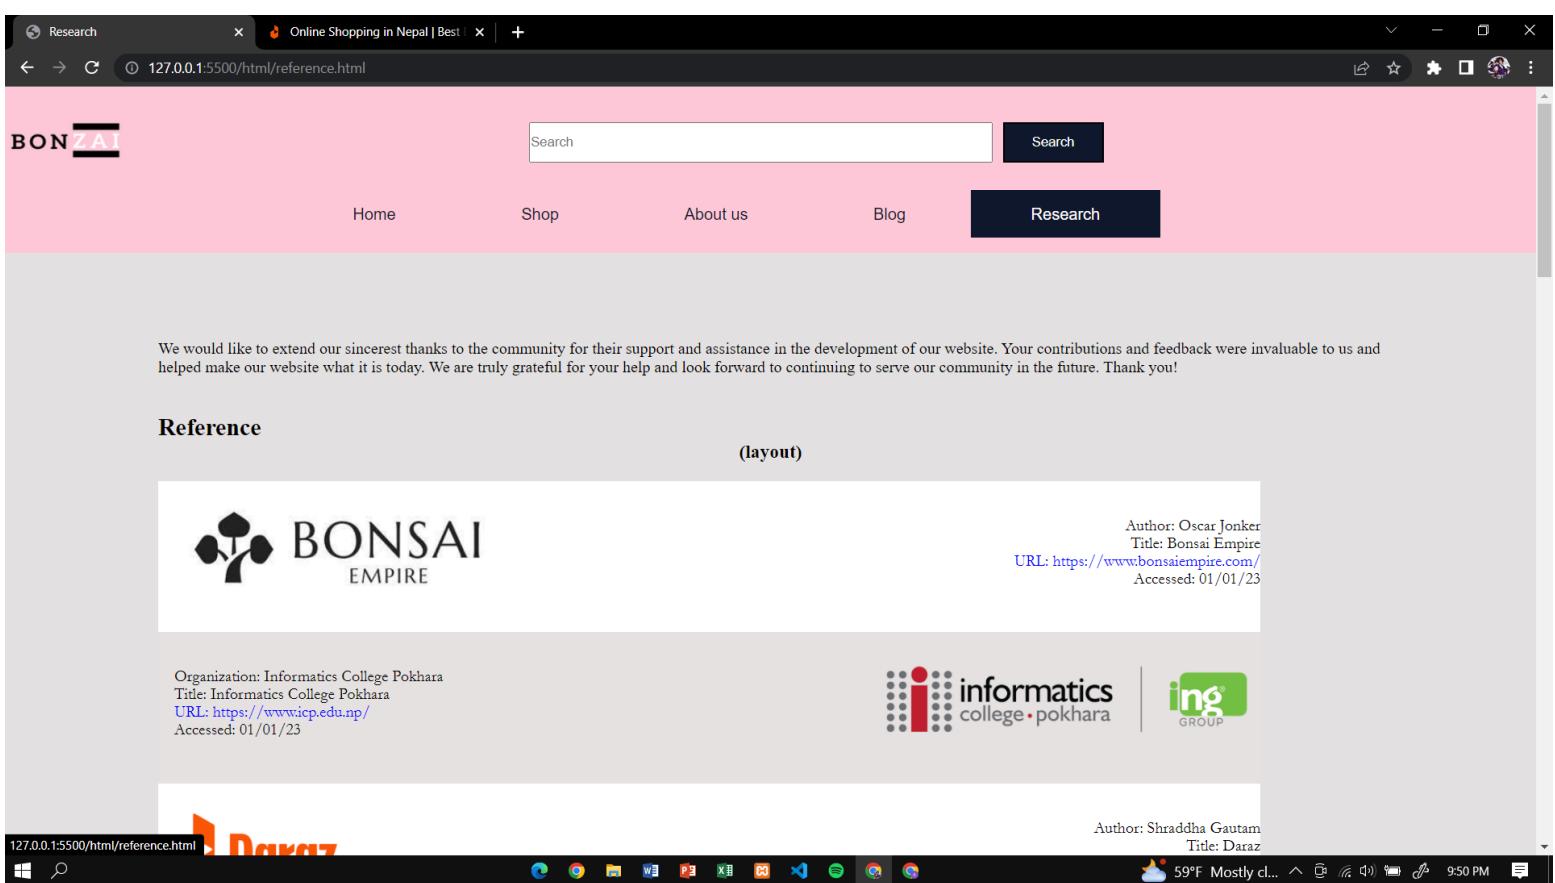

Figure 34 : Test of internal link after clicking on the research page

The screenshot shows a web browser window with the URL 127.0.0.1:5500/html/reference.html. The page has a pink header with the logo "BONZAI" and navigation links for Home, Shop, About us, Blog, and Research. A search bar is at the top right. Below the header, there is a message of thanks to the community. The main content area is titled "Reference (layout)" and contains a card for "BONSAI EMPIRE". The card includes the logo, author information (Oscar Jonker), title (Bonsai Empire), URL (<https://www.bonsaiempire.com/>), and access date (01/01/23). Below this card, there are logos for Informatics College Pokhara and Ing Group. At the bottom, there is a link to Daraz.

We would like to extend our sincerest thanks to the community for their support and assistance in the development of our website. Your contributions and feedback were invaluable to us and helped make our website what it is today. We are truly grateful for your help and look forward to continuing to serve our community in the future. Thank you!

4. Conclusion

All in all, a number of tasks such as research, design of website, actual coding, documentation etc. had to be performed in order for the coursework to be completed. we divided the work between our group members to be more efficient. At first, we had a vague idea about html, CSS and JavaScript but were not proficient enough to implement it immediately in our project work. So, we had to spend a significant amount of time in research about html, CSS and JavaScript.

Every part of the coursework was challenging. We did not have that much problem in designing our website as we already had a design in our mind. However, the selection of color was quite hard as we could find the colors that matched that well. Since we took a lot of references from number of business websites we had a clear concept about our design. After the designing phase, developing the website was a task on a whole another level. Since we were not that proficient on html, CSS and JavaScript, we had to study and research a lot during the development phase. We encountered lots of difficulties during this process. Specially while writing the CSS code we encountered a lot of errors. We had to go through a number of trials and errors in order to achieve the desired design of our website. Similarly, the part for form validation was quite difficult as the JavaScript was not implemented as we wanted. Only after a tedious amount of research we were able to implement the JavaScript for the form validation.

Overall, this coursework was a very interesting and fun activity to do. Not only did it help us expand our knowledge and creativity, but also it provided us with the experience needed for our final year project. After the website was developed we felt very relieved and happy. The major objective of this project was to make us capable of converting a raw design into a fully working front end of a website and we hope we were able to do so.

<h3>(Color)</h3>

When creating the website I found that color was one of the important asset and without the help of following website I might never have been able to create a good color pattern.
